

# NORTHERN FUNDS MULTI-MANAGER EMERGING MARKETS DEBT OPPORTUNITY (NMEDX)

As of 09/30/21

## FUND COMMENTARY

During the third quarter, external emerging markets debt (hard currency) generated a return of -0.70% as measured by the J.P. Morgan Emerging Markets Bond Index Global Diversified. On a regional basis, Latin America and Africa were the worst performers returning -1.67% and -1.43%, respectively, while Middle East performed the best for the quarter with a 0.59% return. On an individual country level, El Salvador, Tunisia and Ghana were a drag on the Index's return for the quarter, while Lebanon and Belize added value. Investment grade (-0.51%) slightly outperformed high yield (-0.90%) during the quarter. Local markets, as measured by the J.P. Morgan Government Bond Index - Emerging Markets Global Diversified, trailed external debt returning -3.10% for the quarter. Latin America struggled, returning -7.20% for the quarter, while Asia performed relatively better, up 0.34%. On a country level, Chile, Peru and Brazil were the worst performers for the quarter, while Dominican Republic and Indonesia contributed positively.

The Multi-Manager Emerging Markets Debt Opportunity Fund underperformed its blended benchmark for the quarter with a return of -3.29% compared to -1.91% for the index. During the quarter, Global Evolution kept pace with the Fund's benchmark. An underweight to Brazil and an overweight to Dominican Republic were additive to performance, while an underweight to China sovereign bonds detracted. Ashmore underperformed the benchmark for the quarter, driven from an off benchmark portfolio allocation to corporates, specifically in China. Overweight positions in Brazil, in both the local and external debt markets, also detracted. Conversely, a modest underweight to local markets was additive for the third quarter.

<sup>1</sup>50% JP Morgan Emerging Markets Bond Index Global Diversified (EMBI Global Diversified) is a uniquely weighted USD-denominated emerging markets sovereign bond index. The EMBI Global Diversified has the same instrument composition as the market-capitalization weighted EMBI Global, which includes USD-denominated fixed and floating rate instruments issued by sovereign and quasi-sovereign entities. The EMBI Global Diversified limits the weights of the index countries by only including a specified portion of those countries, eligible current face amounts of debt outstanding. 50% JP Morgan Government Bond-Emerging Market Index Global Diversified (GBI-EM Global Diversified) tracks the performance of local currency debt issued by emerging market governments. The index incorporates a constrained market-capitalization methodology in which individual issuer exposures are capped at 10% (with the excess distributed to smaller issuers), for greater diversification among issuing governments. It is not possible to invest directly in an index.

**Performance quoted represents past performance and does not guarantee future results. Investment return and principal value will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than that shown here. Performance data current to the most recent month end is available by calling 800-595-9111.**

The Gross and Net Expense Ratios are as of the most recent prospectus. The Net Expense Ratio includes contractual expense reimbursements that, if not extended, will end on July 31, 2022.

**Bond Risk:** Bond funds will tend to experience smaller fluctuations in value than stock funds. However, investors in any bond fund should anticipate fluctuations in price, especially for longer-term issues and in environments of rising interest rates.

**Credit/Default Risk:** is the risk that the inability or unwillingness of an issuer or guarantor of a fixed-income security to meet its payment or other financial obligations will adversely affect the value of the Funds' investments and its returns. Changes in the credit rating of a debt security held by the Fund could have a similar effect.

# NORTHERN FUNDS

## MULTI-MANAGER EMERGING MARKETS DEBT OPPORTUNITY (NMEDX)

**Currency Risk:** Foreign currencies will fluctuate in value relative to the U.S. dollar; therefore you may lose money if the local currency of a foreign market depreciates against the U.S. dollar.

**Emerging and Frontier Markets Risk:** Emerging and frontier market investing may be subject to additional economic, political, liquidity and currency risks not associated with more developed countries. Additionally, frontier countries generally have smaller economies or less developed capital markets than traditional emerging markets and, as a result, the risks of investing in emerging market countries are magnified in frontier countries.

**Foreign (Non-U.S.) Securities Risk:** Investing in foreign (non-U.S.) securities may result in the Fund experiencing more rapid and extreme changes in value than a fund that invests exclusively in securities of U.S. companies, due to less liquid markets, foreign government intervention and adverse economic, political, diplomatic, financial and regulatory factors.

**High-Yield Risk:** Although a high-yield fund's yield may be higher than that of fixed-income funds that purchase higher-rated securities, the potentially higher yield is a function of the greater risk that a high-yield fund's share price will decline.

**Interest Rate Risk:** Increases in prevailing interest rates will cause fixed-income securities, including convertible securities, held by the Fund to decline in value.

**International Risk:** International investing involves increased risk and volatility.

**Liquidity Risk:** Some securities held by the Fund may be difficult to sell, or illiquid, particularly during times of market turmoil. Illiquid securities also may be difficult to value. If the Fund is forced to sell an illiquid asset to meet redemption requests or other cash needs, the Fund may be forced to sell at a loss.

**Multi-Manager Risk:** is the risk that the sub-advisers' investment styles will not always be complementary, which could affect the performance of the Fund.

**Non-Diversified Risk:** The Fund invests in a smaller number of securities than the average mutual fund. The change in value of a single holding may have a more pronounced effect on the Fund's net asset value and performance than for other funds.

Not FDIC insured | May lose value | No bank guarantee
